

A portable, steerable, live gas CCTV system for inspection of metallic or PE service, lateral or riser pipework.

SynthoScope

- Survey up to 7m in length of pipework, 'live' through ECV.
- Fast diagnosis of poor pressure problems due to water ingress, corrosion and other defects.
- Steerable camera head to allow negotiation around at least two short radius metallic elbows.
- One person operation.
- For use on low pressure, up to 75mbarg.

- Obtain instant in-pipe information.
- No interruption to customer supplies.
- Improve customer satisfaction.
- Less Environmental impact.

- High quality 9.5mm camera, featuring the latest LED lighting technology for improved vision.
- Designed primarily for the inspection of metallic services, including lateral and riser pipework in multiple occupancy buildings.
- System includes handheld display unit, rechargeable from mains or 12v in-car.
- Battery designed to last 5 hours continued use from full charge.

Service repair and replacement application

Emergency response and fault finding

Investigating obstructions and pressure problems

Locating joints, defects and water ingress
