

Simultaneously locate and remove water from live gas services whilst recycling the gas back into the pipe; restoring consumer supplies quickly and without the need for excavations.

Water Extraction for Services

- For rapid resolution of supply interruptions caused by water ingress into service pipework.
- Portable, compact and simple to use.
- Simultaneously locate and remove the water without the need for large towable bowser unit.
- Entry via ECV avoiding the need for excavation.
- Unique closed-loop system to recycle the gas back into the service.

- Quickly locate pools and / or droplets of water in live gas services.
- Removes more water from a service than a traditional Bowser/ Suction Vent System.
- Improve customer satisfaction.

- For PE and Serviflex® live gas services 20mm & 25mm diameter
- For metallic live gas services 1" & 1 ¼" diameter.
- For use on low pressure up to 75mbarg.
- System provided with 20m coil and hand held visual display.
- Manual or automatic (with a rechargeable battery) pump options available.
